TV

Experience full HD picture quality combined with easy-to-use controls and a clearly arranged EPG (Electronic Program Guide) which will help to guide you through the programming wilderness. To schedule a recording, simply mark the EPG. These recordings will be saved to the central NAS (network attached storage). During the recording process it is even possible to view the recording from another room.

FILMS

The film library provides a full HD movie experience at home. Once inserted in the Media Server or Media Client, your disc is copied and saved to NAS, at which point it can be accessed from anywhere in the house.* Important information about the film as well as the HD album cover are automatically downloaded from the Internet and also saved. Of course, classical Blu-ray player features are also at your disposal.

PHOTOS

Conveniently view vacation photos on your TV in HD quality. A variety of features are available, such as image rotation and automatic slide shows. Let the 'slide show' begin, backed by the musical accompaniment of your choice!

* Based on the laws of your country of residence, the digitalization of Blu-ray disks and DVDs may not be permitted.

MUSIC

The Media Server solution can handle everything from the space-saving MP3 format to the lossless FLAC format. Simply insert the audio CD into the disk drive, and in a few minutes the CD will be copied and saved to the central NAS, at which point it can be accessed from throughout the house. The album cover and lyrics will be automatically downloaded from the Internet.

WEB RADIO

Listen to your favorite stations without irritating reception problems. Web radio offers a broad selection of international radio stations. A fan-art feature generates background images which are appropriate to the current radio selection – thus you can see what is being played.

WEATHER

The five-day weather forecast will not leave you out in the rain. The system displays important weather information – ranging from a simple sundial to satellite photos, which are updated on an hourly basis.

✓ YOUR ADVANTAGES

- Automatic recording of regular broadcasts such as series, news or informational programs
- Central storage of TV recordings, photos, music, videos, films and your digital documents
- Security for your recordings and data via a RAID system
- No need to search for CDs, DVDs or BDs – once saved, media are available in every room*
- Conveniently view photos and personal videos in every room
- Instant ripping of CDs, DVDs and BDs*
- Use your iPhone, Android or Windows smartphone to operate your MULTICON system.
- No further satellite connections are needed in other rooms
- Expandable, easy to operate, suitable for the living room, and future-proof
- Operation is possible via wireless mouse, keyboard and infrared remote control.
- High level of system stability – the Media Server/Media Client do not contain any moving parts (except for the optional Blu-ray drive)

+ EXPANDABILITY

- Individual applications:** Internet browser, email software, Instant Messaging apps, etc. (Windows 7 applications)
- Security:** IP-surveillance cameras and alarm system, door-mounted video-intercom, open the door to your house with a cell phone.
- Audio:** Integration of a multi-room audio solution
- Home Automation:** Manage your entire intelligent home (lighting, shading, heating, etc.)

* Based on the laws of your country of residence, the digitalization of Blu-ray disks and DVDs may not be permitted.
